

PSG Signage Rollout Portal

Screenshots, feature summary, and usage guide

This portal manages rollout projects for PSG signage work. It tracks projects from intake through installation, shows dashboard metrics, stores notes and files, and supports live reads and writes through Supabase.

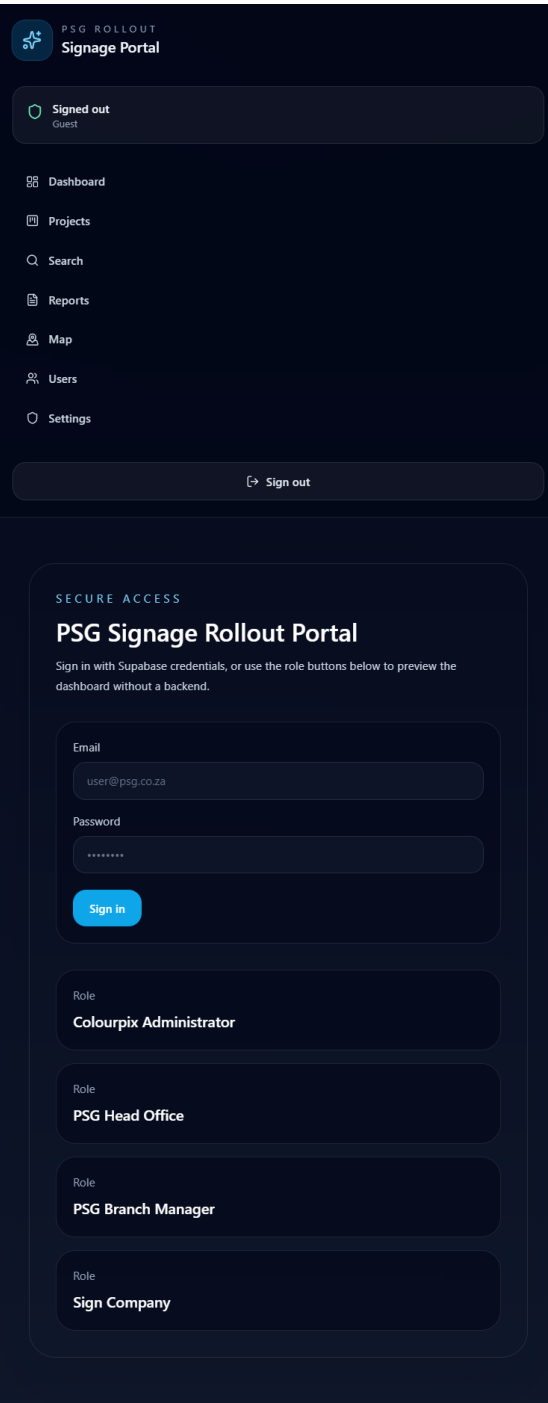

How to use it: sign in with a Supabase user, open Projects to add a rollout, open Users to add user profiles, then use Search, Reports, and Map to review the live dataset. The dashboard gives a quick snapshot of the work queue and recent activity.

1. Sign in on the Login page with Supabase credentials or use the role preview buttons for a local session.
2. Add a rollout from the Projects page using the create form.
3. Add a user profile from the Users page so the profile table stays in sync with Auth.
4. Use the Dashboard, Search, Reports, and Map pages to monitor progress and find records quickly.

Captured Pages

Login

Secure entry point for Supabase sign-in, with role preview buttons for local testing.

Dashboard

A summary view of project counts, recent activity, and today's actions.
